

OPERANDI: DISK STYLI & ACCESSORIES

DISK STYLI - Useful for measuring undercuts and grooves, our standard disk styli are available in several configurations. Most of our disks are constructed of hardened stainless-steel, but we do offer standard ceramic and ruby disks with M2 threading as shown below. If we do not have exactly what you need we will be happy to quote a special disk customized to meet your requirements. Be sure to hover over the boxes that show thread size or ruby or ceramic and click for a listing of the items available along with their dimensional details.
